Notes about the population projection exercise:

1. The population projection for China for the period 2021-2050 was prepared jointly by the People's Republic of China, Department of Economic and Social Affairs of the United Nations, and the United Nations Population Division to project the needs of the world's total fertility rate, on the basis of the actual total fertility rate of China since 1949.

2. The population projection examines the trends of China's population in different confidence intervals of 80 and 95 percent, and adopts the Chinese official data since 1949 as the base data, using the population projection model developed by the Chinese National Bureau of Statistics.

3. The population projection is used to project the trend of China's population in different confidence intervals of 80 and 95 percent, and adopts the Chinese official data since 1949 as the base data, using the population projection model developed by the Chinese National Bureau of Statistics.

4. The population projection is used to project the trend of China's population in different confidence intervals of 80 and 95 percent, and adopts the Chinese official data since 1949 as the base data, using the population projection model developed by the Chinese National Bureau of Statistics.

5. The population projection is used to project the trend of China's population in different confidence intervals of 80 and 95 percent, and adopts the Chinese official data since 1949 as the base data, using the population projection model developed by the Chinese National Bureau of Statistics.

6. The population projection examines the trends of China's population in different confidence intervals of 80 and 95 percent, and adopts the Chinese official data since 1949 as the base data, using the population projection model developed by the Chinese National Bureau of Statistics.

7. The population projection examines the trends of China's population in different confidence intervals of 80 and 95 percent, and adopts the Chinese official data since 1949 as the base data, using the population projection model developed by the Chinese National Bureau of Statistics.

8. The population projection examines the trends of China's population in different confidence intervals of 80 and 95 percent, and adopts the Chinese official data since 1949 as the base data, using the population projection model developed by the Chinese National Bureau of Statistics.

9. The population projection examines the trends of China's population in different confidence intervals of 80 and 95 percent, and adopts the Chinese official data since 1949 as the base data, using the population projection model developed by the Chinese National Bureau of Statistics.

10. The population projection examines the trends of China's population in different confidence intervals of 80 and 95 percent, and adopts the Chinese official data since 1949 as the base data, using the population projection model developed by the Chinese National Bureau of Statistics.

11. The population projection examines the trends of China's population in different confidence intervals of 80 and 95 percent, and adopts the Chinese official data since 1949 as the base data, using the population projection model developed by the Chinese National Bureau of Statistics.

12. The population projection examines the trends of China's population in different confidence intervals of 80 and 95 percent, and adopts the Chinese official data since 1949 as the base data, using the population projection model developed by the Chinese National Bureau of Statistics.

13. The population projection examines the trends of China's population in different confidence intervals of 80 and 95 percent, and adopts the Chinese official data since 1949 as the base data, using the population projection model developed by the Chinese National Bureau of Statistics.

14. The population projection examines the trends of China's population in different confidence intervals of 80 and 95 percent, and adopts the Chinese official data since 1949 as the base data, using the population projection model developed by the Chinese National Bureau of Statistics.

15. The population projection examines the trends of China's population in different confidence intervals of 80 and 95 percent, and adopts the Chinese official data since 1949 as the base data, using the population projection model developed by the Chinese National Bureau of Statistics.
